Release 6.5.0
DREYSE

Fall 2026 | Product Release Notes

What's new in Release 6.5.0

The Fall 2026 AccuShoot release brings more realistic training, streamlined system management, expanded content, and new tools for creating custom scenarios. This publication covers improvements to shot detection and calibration, training workflows, scenario authoring, session sharing, and platform reliability.

AT A GLANCE

Training
Multi-threat engagement, DQ scoring and new drills.

Setup
Long-range projection, tuning and camera rotation.

Creation
Expanded CFX targets, visuals and scenario sharing.

Management
Device reassignment, screensavers and session QR codes.

RELEASE CODENAME

Johann Nikolaus von Dreyse

1787-1867

Johann Nikolaus von Dreyse invented the Needle Gun in 1836, an early breech-loading bolt-action rifle adopted by a major military. Release 6.5.0 honors his contribution to firearms innovation.

Contents

Introduction and release codename 2

Shared training improvements 4-6

System management and session sharing 7-8

New training content 9-10

CFX | Scenario creation 10-12

Website, community and platform reliability 13

Partner Network 14

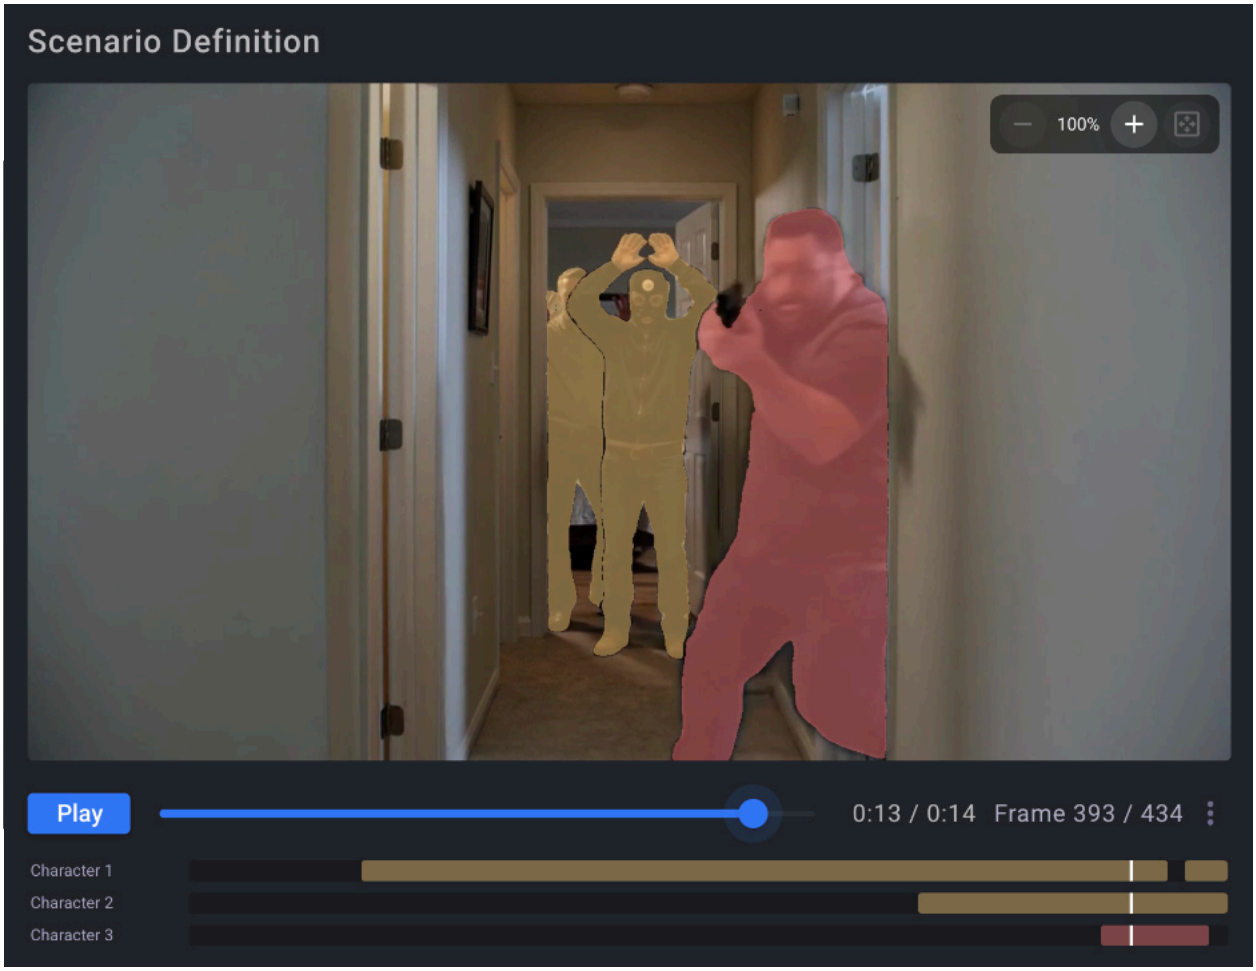

Product applicability is identified within each update. Shared features are grouped together rather than repeated under every product.

Train Smarter, Create More and Share Instantly!

We are excited to share our latest platform update!

The **Fall 2026 AccuShoot release** brings more realistic training, streamlined system management, and new tools for creating custom scenarios.

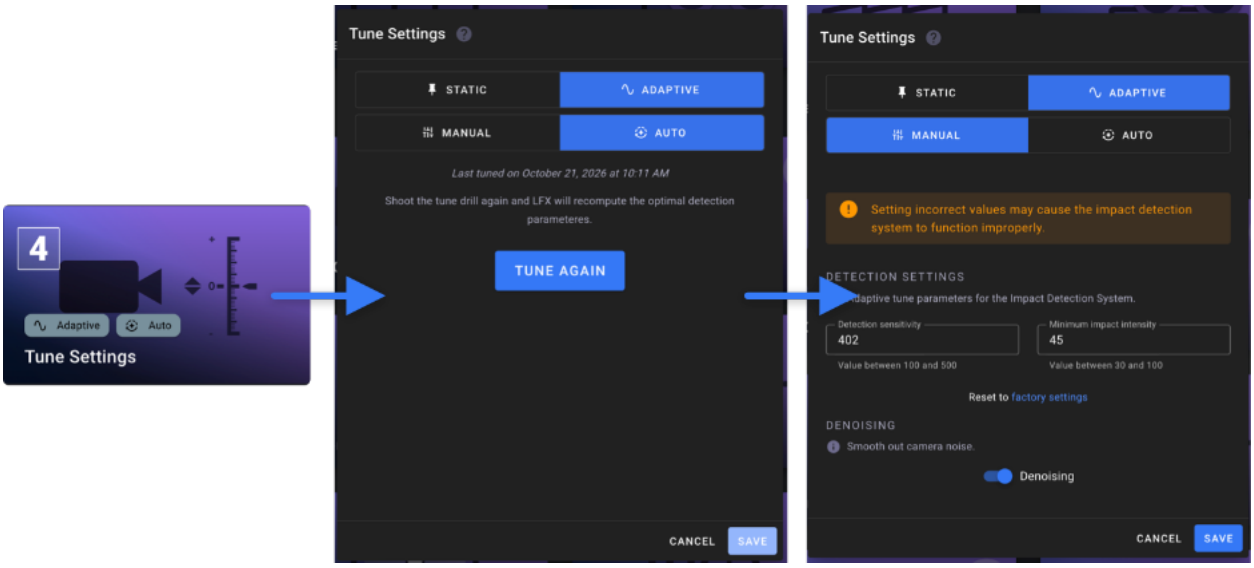

LFX / DFX / MFX / HFX: More Realistic Training, Easier Setup

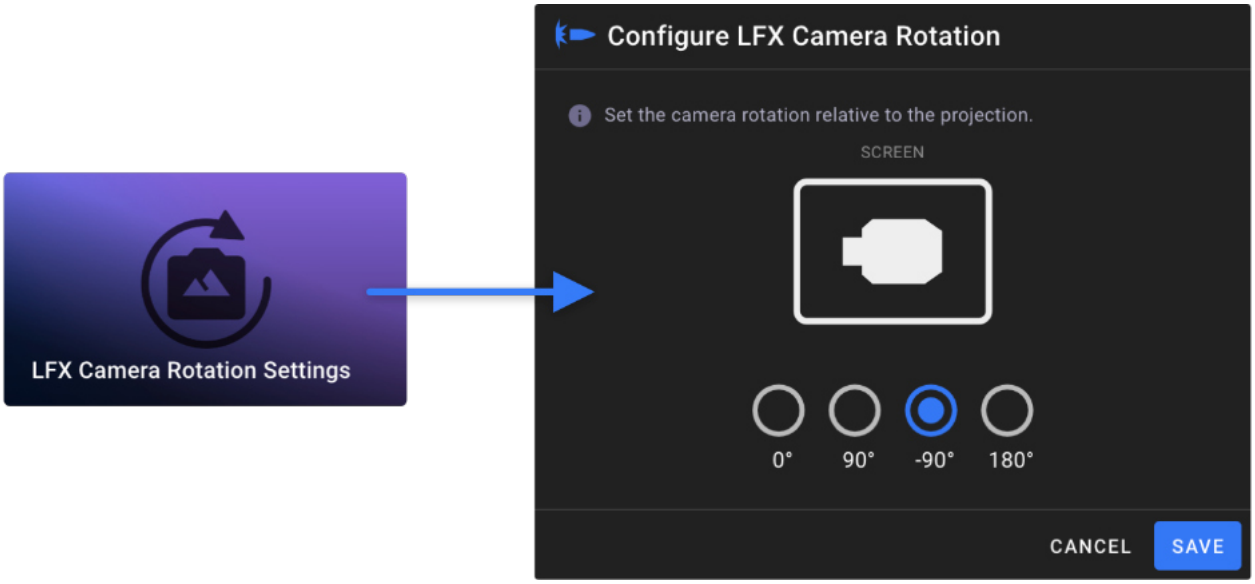

Engage every threat. Multi-threat scenarios now continue until all threats are neutralized, challenging shooters to stay engaged through the entire drill.

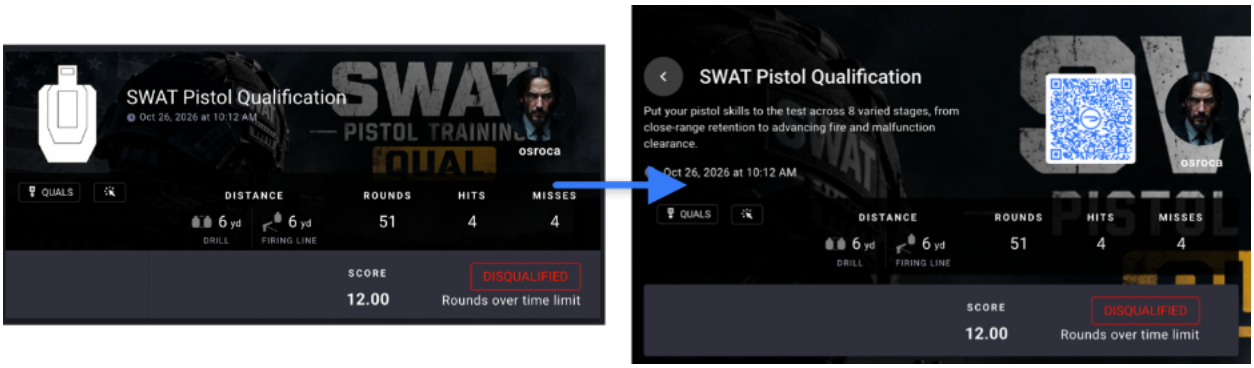

Simplify long-range installations. A new projection setup mode uses the actual firing-line distance to the screen to determine target size, without distance simulation. Find it under Screen Settings.

Automatically tune your setup. A redesigned Automatic Shot Detection interface and Tune Drill workflow make setting detection thresholds faster and more reliable.

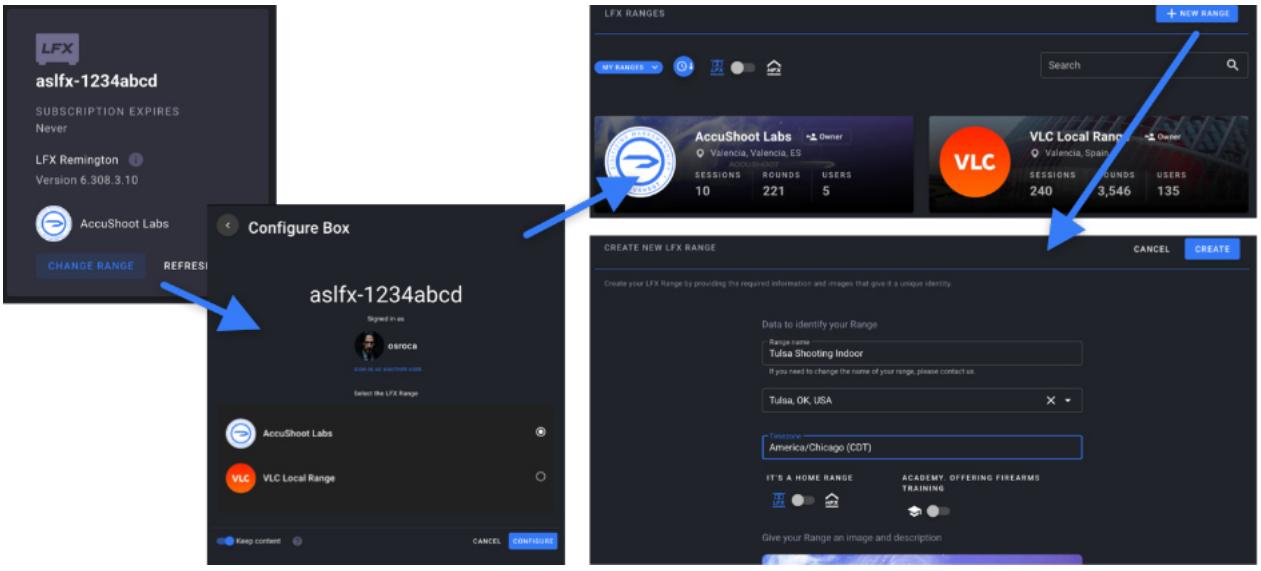

Flexible camera orientation: Now you can easily set shot-detection camera rotation to 0°, 90°, 180°, or -90° to accommodate ceiling, wall, or elevated platform mountings.

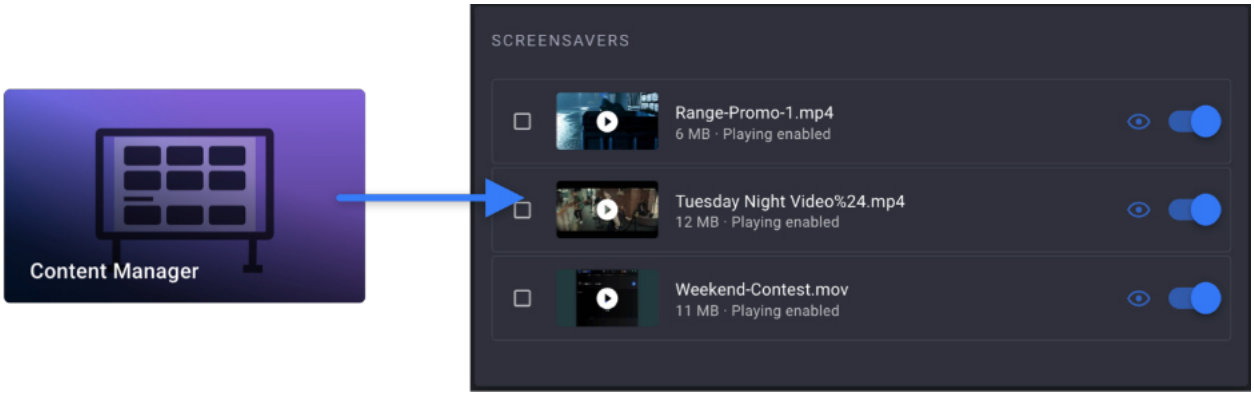

Learn from every session. Scores are now available even when a drill ends in a disqualification (DQ), giving shooters and instructors more opportunities to review performance.

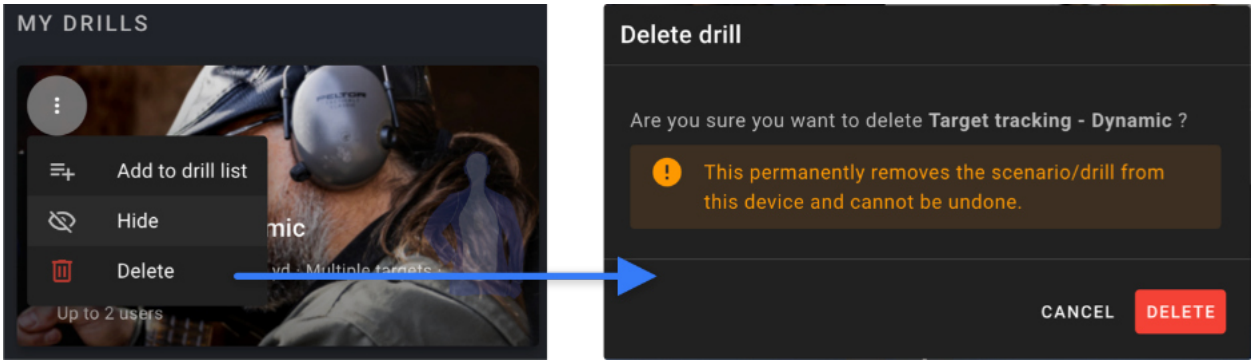

Manage Your Training Environment with Ease

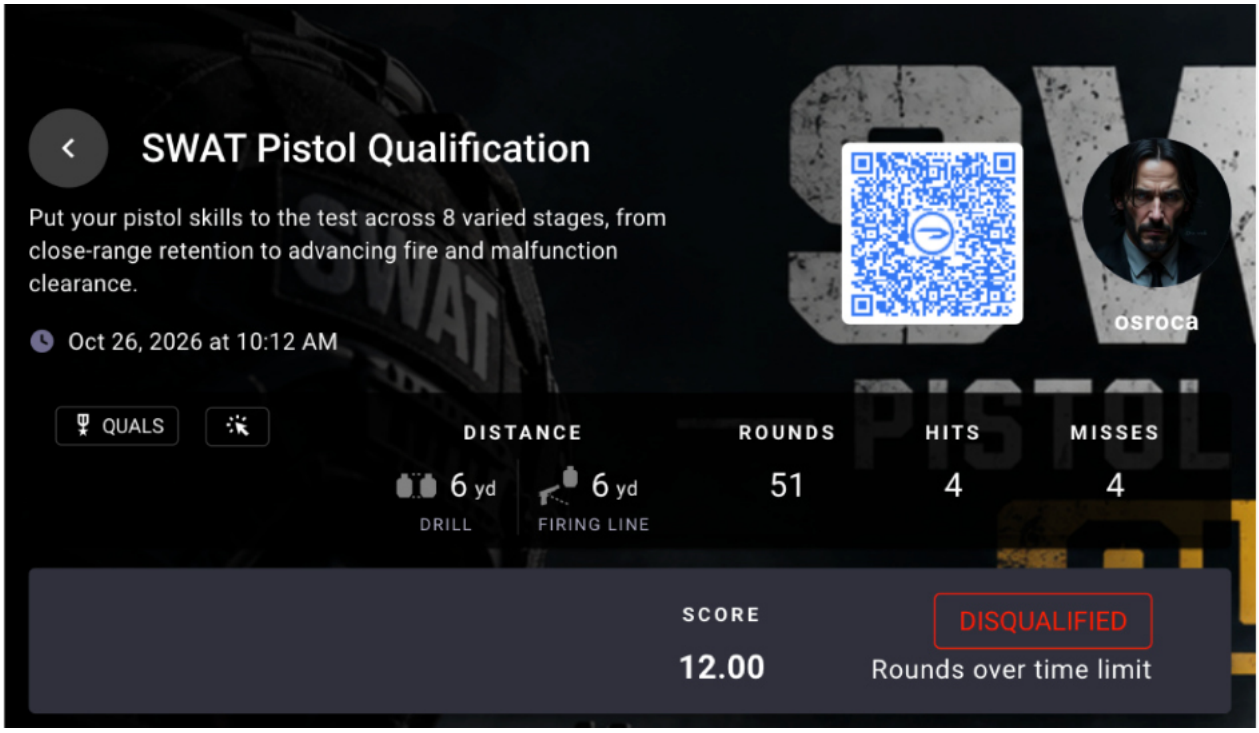

Flexible Device Reassignment: With this release, you can reassign hardware units between ranges smoothly across LFX, DFX, CFX, MFX, HFX, and YFX environments.

Custom Screensavers: Allows admins to deploy custom screensaver videos across LFX, DFX, and HFX units directly from CFX. This enables better branding opportunities when systems are idle.

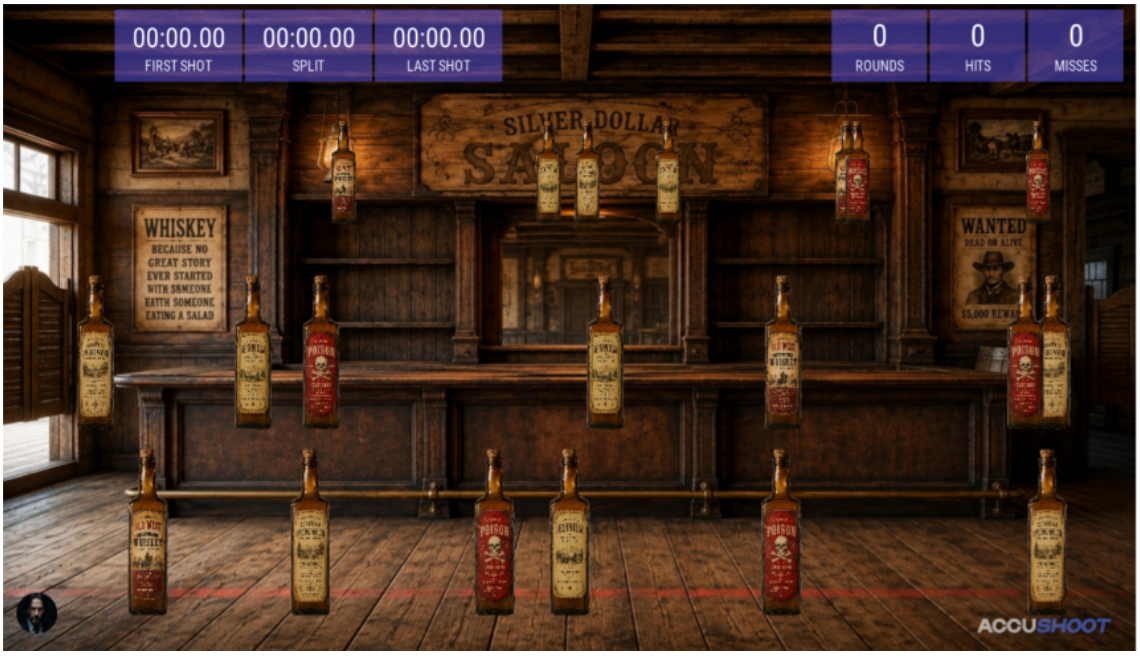

On-Device Drill Management: Remove or hide CFX-installed drills directly on the specific device interface.

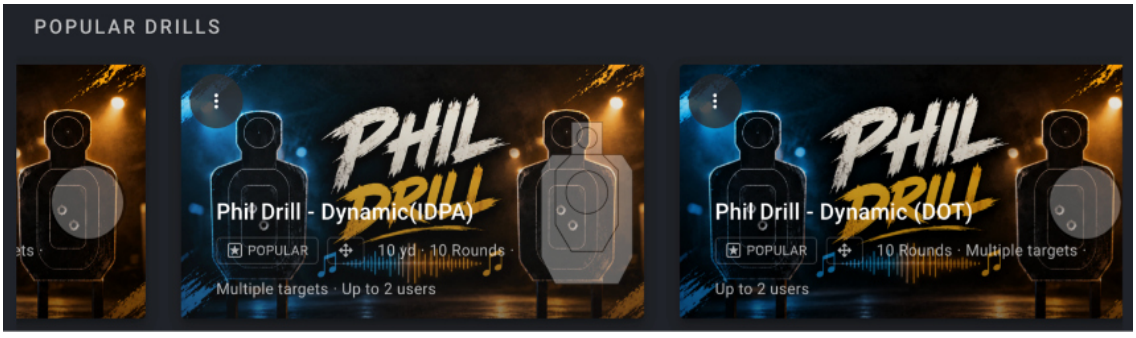

Scan. Share. Review. A QR code now appears on the device after every completed session. Shooters can scan it to access their results on AccuShoot.com in seconds.

Explore New Training Content

The Fall 2026 release expands your training library with the new **Western** channel, plus new **Real World** scenarios and multiple **Phil Drills** listed under Popular Drills.

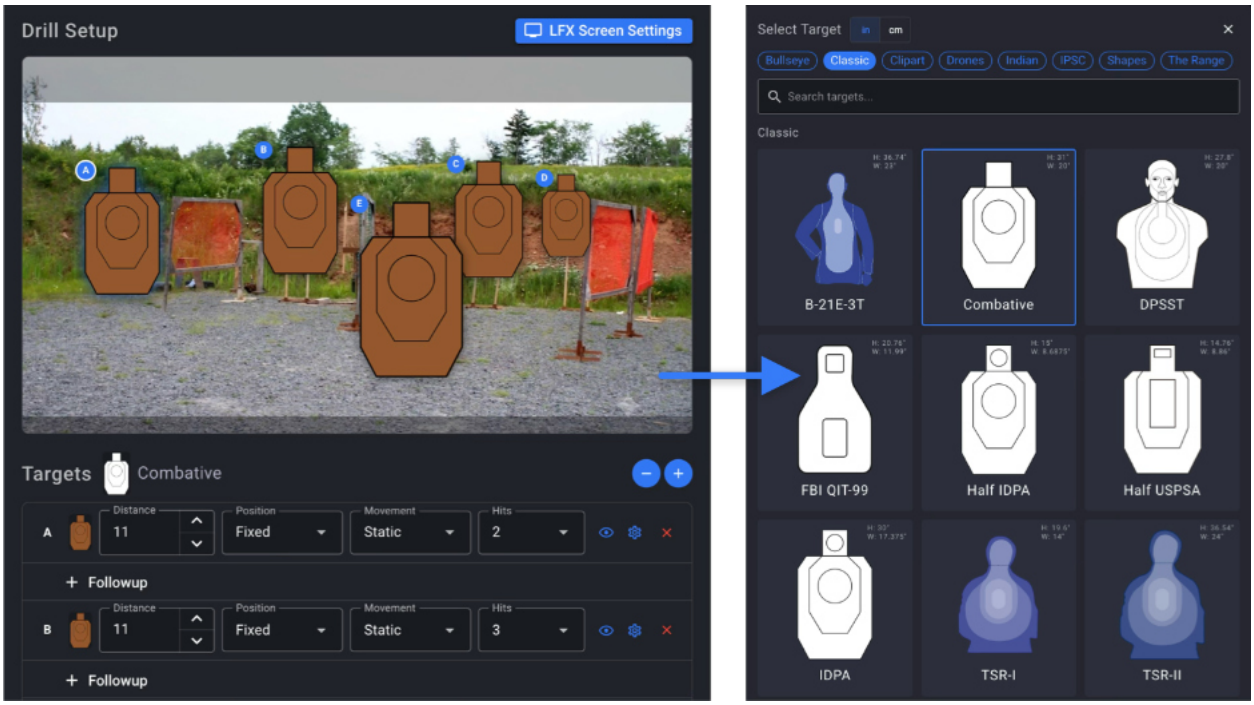

Western Channel: Take on new tactical challenges in the Silver Dollar Saloon with this western offshoot of Ghosts drills.

Phil Drills: New and exciting set of drills dialing up the fun factor by prompting the shooter to synchronize his/her shots with the drum beats from hit songs. They have been added under **Popular Drills**.

Real-World Scenarios: The Fall 2026 update also expands the real-world drills catalogue designed to test decision-making and accuracy.

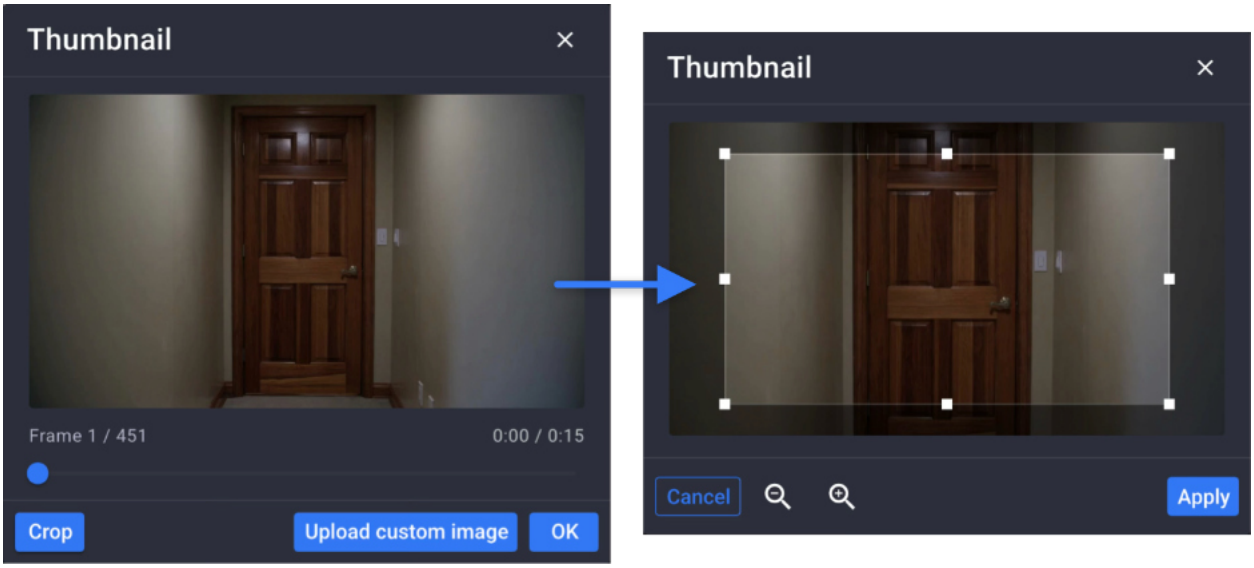

CFX: More Possibilities for Every Scenario

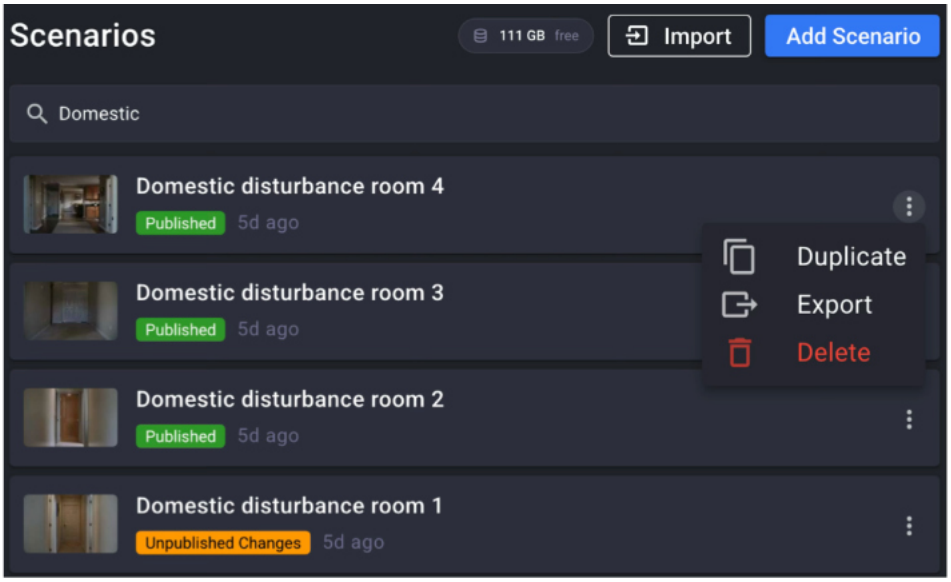

Build richer environments. The expanded target library includes classic targets, geometric shapes, clipart, drones, animals, and official bullseye targets. New household objects and tactical barriers add detail to Shoot House scenarios.

Control the challenge. Set the number of hits required to neutralize each target and create larger, more dynamic scenarios with support for more simultaneously detectable people.

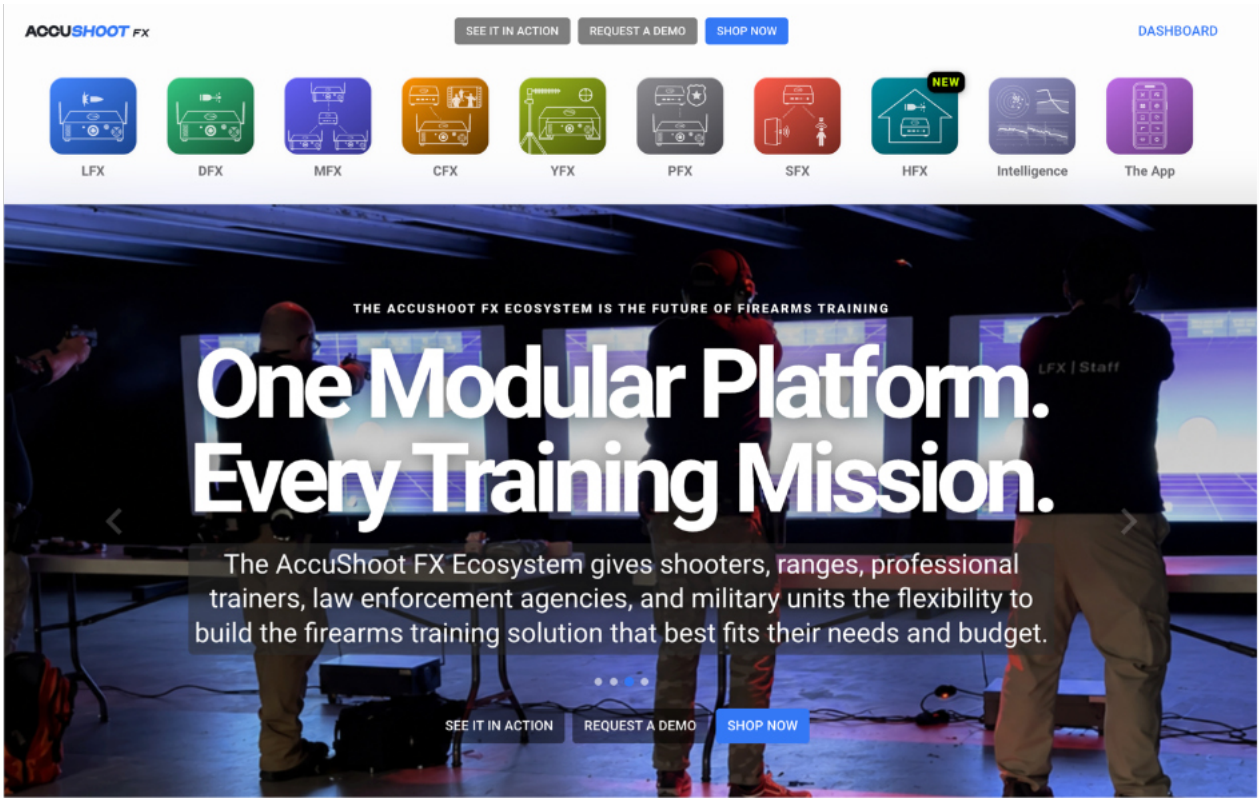

Make each drill your own. Customize impact visual effects, cover artwork, plus start and finish images. In addition, built-in cropping and zooming let you prepare images without leaving CFX.

Share your creations. Import and export complete scenarios and custom drills between CFX installations to simplify sharing, archiving, and transfer.

New Website & Growing Community

Check out our freshly redesigned website at accushoot.com to explore the full FX hardware line, keep up with local events, and join the conversation across our social channels.

A Stronger Platform Behind Every Session

This release also improves MFX stability, device communication, person detection accuracy, and video conversion, alongside platform-wide performance improvements and bug fixes.

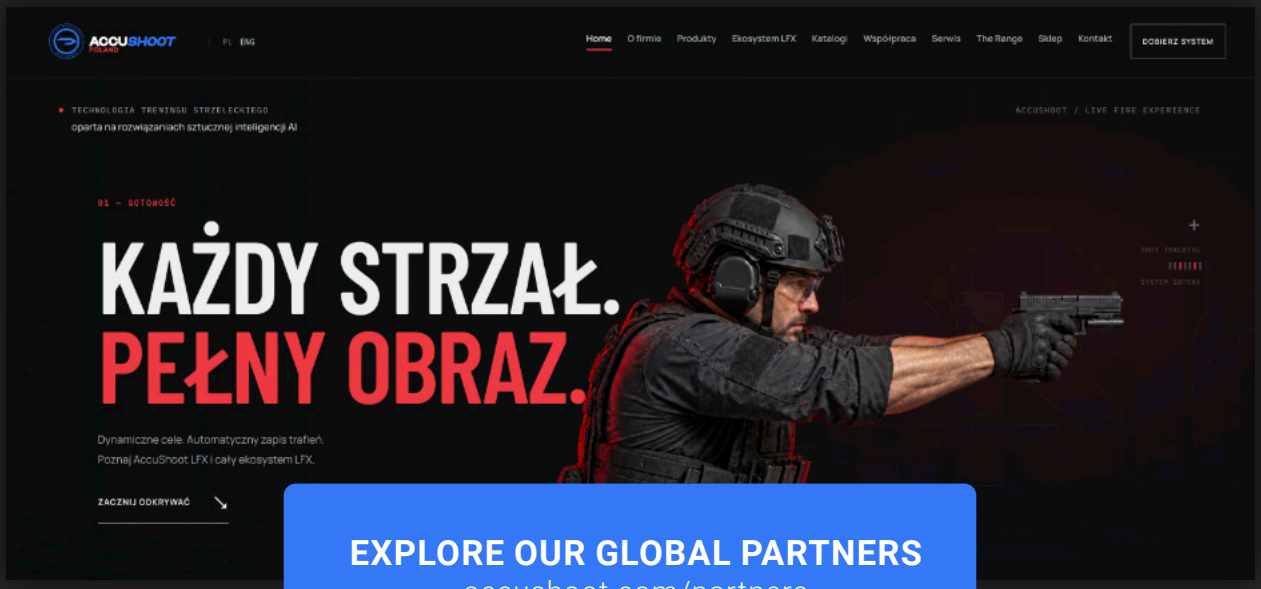

Now it's your turn to explore the new features and content in your AccuShoot system—and bring fresh challenges to your next training session.

OUR GLOBAL PARTNER NETWORK

Welcoming AccuShoot Poland

AccuShoot continues to expand its international partner network, bringing local expertise to the design, deployment, and support of FX training environments.

A new local presence in Poland: AccuShoot Poland (accushoot.pl) provides local sales, system design, deployment, service, and demonstrations. Its Polish-language website introduces the AccuShoot ecosystem to ranges, training organizations, and individual shooters.
